Research Interest

Federated/Distributed ML Systems Data-centric LLM LLM Agent

Projects

Agent Inference Task Decomposition and Cost Modeling • Decomposing multi-round Agent tasks into a DAG of LLM-inference and tool-call sub-nodes to enable fine-grained global scheduling. • Building a precise per-node inference cost model for Qwen3-8B (prefill / decode / memory / communication) coupled with a DeBERTa-v3 output-length predictor.
